2500+

PROJECTS COMPLETED IN MORE THAN 30 COUNTRIES

2

Speed

We use the Agile methodology to meet our clients' needs as they change throughout the project.

We plan our work based on weekly iterations.

We are our clients' partner: we understand their business and product.

Transparency

The communication is always our main focus – we keep our clients updated about every step in Skype and development management system.

Clients can access the latest version of products at any time on the live staging server.

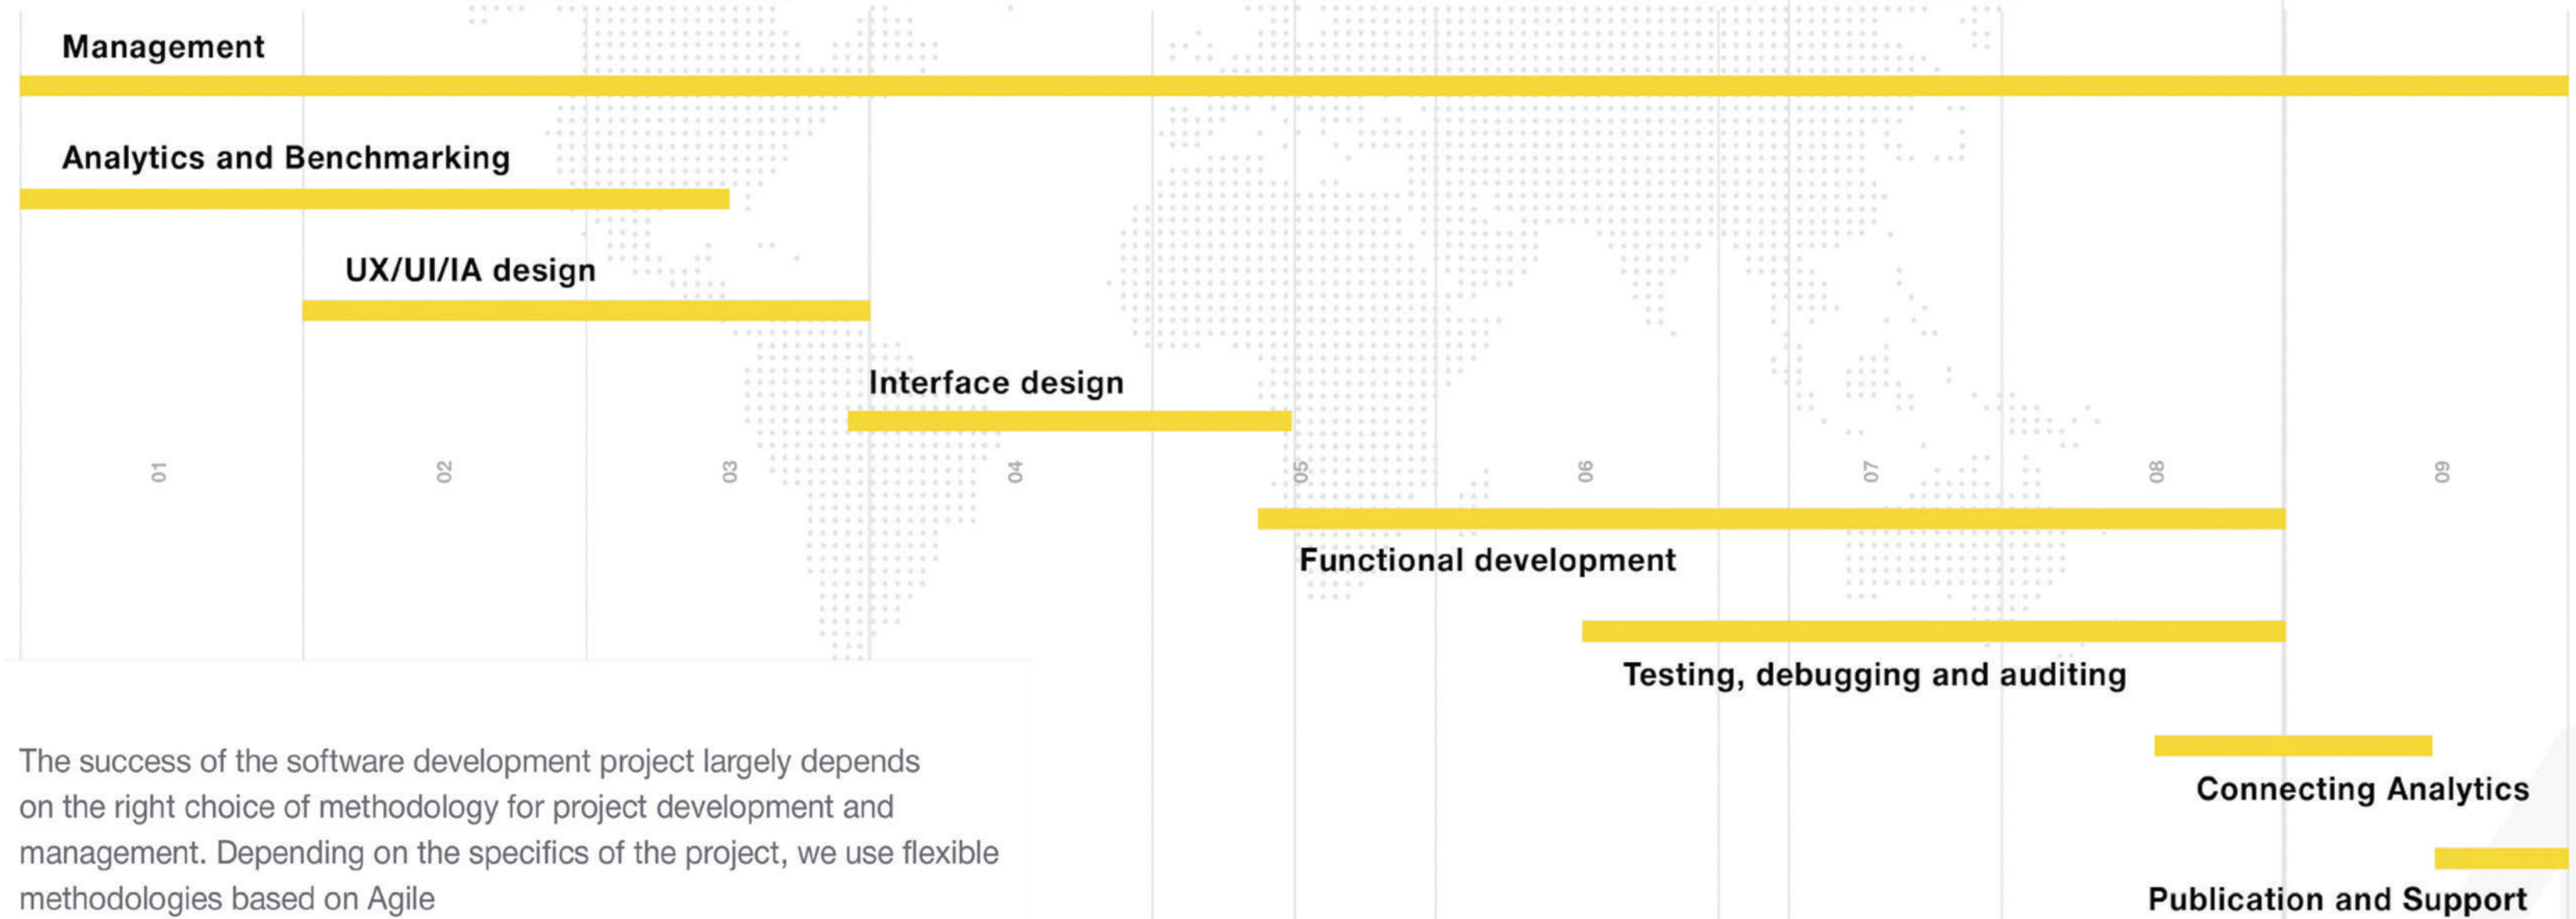

Quality

Our process is built around a strong culture of code testing.

Each functionality produced by our developers contains an automated test layer.

Each line of code is checked by another developer and our testers verify every feature to catch all potential issues.

DEVELOPMENT PROCESS

BACK-END

- ✓ **Technologies used:** Ruby, Python, .NET, React, Laravel, Yii, Symfony
- ✓ **Style guides:** Scrutinizing each and every file and operation to minimize potential risks and failures. Ensuring the code is approaching to 99% error-free through unit tests.
- ✓ **Designs:** Using the best framework and utilities to meet your business needs. Offering the best value for your money. Writing clean, well-documented code, which complies with the standards of the programming languages.

ULC

New-gen social network with live video streaming. The Platform enables streamers to broadcast in different categories solo or with a partner and to play built-in mini-video games with random participants from any geography. The incentive for viewers and participants playing mini-games is the ability to “make a wish”: request a losing party to perform various entertaining tasks on live video stream.

Region: South-East Asia

Technologies: REST API, Android Java Native, JNI, NDK (C / C ++), Swift 4, Unity 3D, Firebase, OpenTok, XMPP, WebRTC, RTMP, RTC
